**Introduction**
The HM-BT-BAT-ER HART® Modem, Bluetooth is designed to connect PC’s to HART networks via wireless Bluetooth technology. Once the HART side is connected, the user’s application software can then configure, monitor, and document HART based instrumentation from up to 275ft (83.8m) away.

**System Diagram**
The complete system consists of Host PC with Bluetooth transmitter, HM-BT-BAT-ER, and HART network. The Host PC can be a Pocket PC PDA. For PC’s without an integral Bluetooth transmitter, there are many add-on transmitter modules available, such as the IO Gear GBU321 Bluetooth 2.0 USB Adapter, Class 1. ProComSol, Ltd supplies this adapter as BT-ADAPTER.

![System Diagram](image)

**Figure 1. Bluetooth System Diagram**

**Bluetooth Range**
Note that Class 1 Bluetooth transmitters, such as the GBU321 have a range of 275’.
Class 2 transmitters, such as the HP IPAQ PDA, have a range of 25’. The HM-BT-BAT-ER works with both Class 1 and Class 2 transmitters, but operation is limited to the range of the master transmitter.

**Software Drivers**
No additional software drivers need to be installed.

**Battery**
The HM-BT-BAT-ER contains a Li-Ion rechargeable battery. A fully recharged battery will provide 14 hours of continuous service.

**Battery Charging**
Simply connect the HM-BT-BAT-ER to your PC USB Port using the supplied USB cable. The yellow “Charge On” LED should illuminate. Note that near a full charge, the “Charge On” LED may blink.
Power Switch and LED
Press the power switch to turn on the unit. The green “Power” LED will illuminate when
the unit is on. Press the power switch again to turn the unit off. Turn the unit off when
not in use to conserve battery life.

Battery Charge Error
When the red “Charge Error” LED illuminates, there is a battery charge error condition.
This is most likely due to high temperature on the battery. Remove the USB cable from
the unit and turn the unit off. Put the unit in a cool location and wait 30 minutes before
attempting a recharge. Contact ProComSol, Ltd if the condition persists.

Initial PC Setup/ Bluetooth Modem Discovery
The following procedure must be done at least once for the PC to “Discover” the HM-
BT-BAT-ER.
1. Turn on the HM-BT-BAT-ER. It does not need to be connected to the HART
    network.
2. Run the Bluetooth driver software that came with your PC or Bluetooth adapter
    (ie Linksys). There is typically a Bluetooth icon on the system tray that can be
double clicked.
3. Select “Find Bluetooth Devices” or “Site Survey” to locate any Bluetooth devices
    in the area. You could also search for services. Search for “Serial Services” to
    also locate Bluetooth devices.
4. A device labeled “HART Modem” should be discovered.
5. Double click on the “HART Modem” icon. The available serial service will
    appear as “AMP-SPP”, and say it is not connected.
6. Double click on “AMP-SPP”. The Bluetooth connection will be made and the
    assigned COM port will be reported. Note that if 2 COM ports are reported, use
    the “Outgoing” port. Note this port number for your application software.
7. Some Bluetooth drivers may prompt for a “Passcode”. Enter “1234”, without the
    quotes.

Discovery needs to be repeated only when adding or changing HM-BT-BAT-ER
modems, or when multiple modems are in the Bluetooth area.

PC Applications
Start your PC application and set the com port setting to use the com port reported during
Discovery. Use the application as normal. The HM-BT-BAT-ER looks like a normal
RS232 device to the application software. The application software does not need to be
modified.

Multiple HM-BT-BAT-ER Modems
When several modems are in the same area, the Discovery process needs to be repeated.
The modems will appear as “HART Modem (1)”, “HART Modem (2)”, etc. It may
require trial and error to determine which modem is connected to the desired HART
network.
Initial Pocket PC/Bluetooth Modem Discovery
The following procedure must be done at least once for the PDA to “Discover” the HM-BT-BAT-ER.

1. Turn on the HM-BT-BAT-ER. It does not need to be connected to the HART network.
2. Run the wireless setup utility and enable Bluetooth.
3. Select “Manage” to bring up the “Bluetooth Manager”.
4. Select “New” to start the “Connection Wizard”. A list of Bluetooth device types should appear.
5. Select “Explore Bluetooth Device”. This will start a site survey to look for available Bluetooth devices
6. A device labeled “HART Modem” should be discovered.
7. Select the “HART Modem” icon. The available serial service will appear as “ZV-SPP”.
8. Highlight “AMP-SPP” and select “Next”. Then select “Finish”
9. Double click on the “HART Modem: AMP-SPP” icon. The Bluetooth connection will be made.
10. Some Bluetooth drivers may prompt for a “Passcode”. Enter “1234”, without the quotes.

Discovery needs to be repeated only when adding or changing HM-BT-BAT-ER modems, or when multiple modems are in the Bluetooth area.

Pocket PC Applications
Bluetooth serial modems are generally assigned COM8 for application software use. Start your PC application and set the com port setting to COM8. Use the application as normal. The HM-BT-BAT-ER looks like a normal RS232 device to the application software. The application software does not need to be modified.

To verify the com port assignment, follow this procedure.

1. Tap the top of the PDA screen to bring up the “Start” menu.
2. Select “Settings”.
3. Under the “Systems” or “Connections” tab, a Bluetooth icon should appear. Select this icon. The “Bluetooth Settings” menu should appear.
4. Select the “Services” tab. A list of services will appear.
5. Select “Serial Port”. The service settings will appear.
7. The Com port setting is shown under “Outbound COM port:” As stated earlier, this value will be COM 8.
8. Make sure the “Default device…” check box is Unchecked.
HART Connections
The modem can be connected in one of two ways: across the loop load resistor (A – B) or across the HART transmitter terminals (C – D). See Figure 2.

![Diagram of HART Connections]

Figure 2. HART Connections

**NOTE:** Make the HART connections before turning on the power to the modem. This will improve initial communication reliability.

PC Test Software
Program “HM Test” is included on the installation CD to test the operation of the HM-BT-BAT-ER. Launch the program from the CD or from the installed icon. Enter the com port that was assigned to the modem by Windows. Then select “Poll HART Network” to connect to a HART device. The program sends HART Command 0 to determine what transmitters are connected to the loop. The “Status” box will indicate successful operation of the HM-BT-BAT-ER in your system. Consult the “Troubleshooting” section of this manual if test failure.

Pocket PC Test Software
Program “HM Test CE” is included on the installation CD to test the operation of the HM-BT-BAT-ER.
1. Use the ActiveSync utility to load this program on to your Pocket PC.
2. Start “File Explorer”.
3. Navigate to the “My Device” directory.
4. Tap “HM Test CE” to launch the program.
5. Tap “Poll” to search for a HART device on the network. The program sends HART Command 0 to determine what transmitters are connected to the loop. The “Status” box will indicate successful operation of the HM-BT-BAT-ER in your system. Consult the “Troubleshooting” section of this manual if test failure.
Troubleshooting

Problem:
Will not communicate

Verify the following:
1. Com port number in application is the HM-BT-BAT-ER com port number.
2. Loop power supply is on.
3. Loop resistance between 250 ohms and 1Kohms.
4. Loop current within HART limits.
5. If multi drop configuration, all transmitters in loop have unique addresses.
6. HM-BT-BAT-ER HART connections across loop resistor or across transmitter terminals.
7. Battery is charged.
8. Modem power switch is on and LED is illuminated.
9. Perform the “Discovery” procedure again and verify a connection can be made.
10. If using the Linksys USBBT100, verify the Linksys Bluetooth driver is installed and not the Windows Bluetooth driver. There is a known issue with the Linksys install and Windows XP SP2. Go to www.linksys.com and search for “USBBT100” for details.

Problem:
Communications unreliable

Verify the following:
1. You are in radio range of the master transmitter. For Class 1 devices 275 ft, for Class 2 devices, 25 ft.
2. Vary the orientation of the master transmitter or the HM-BT-BAT-ER to improve radio link strength.
3. Battery is charged.
4. HART connections made before power turned on.
5. Transmitter not in Burst mode. Communications can occur in Burst mode, but more retries will be necessary for success.
6. In some applications, a connection can be lost, which looks like a communication lock-up. Perform the Discovery process again to reestablish the link without the need to restart your application.

Problem:
Will not communicate with Cornerstone

Perform the following:
1. In directory “CSCONFIG/DB”, open file “CSLOCAL.INI”.
2. Search for “[RDLS2]” without the quotes.
3. Change “Debug=0” to “Debug=8”, again without the quotes.
4. Save the file.
Warranty
The HM-BT-BAT-ER is warranted for 1 year for materials and workmanship. Contact Support at ProComSol, Ltd if having any problems. An RMA (Return Material Authorization) number obtained from ProComSol, Ltd is required on all returned items.

Notice of FCC Compliance
This product contains a radio module that has been tested and found to comply with the FCC Part15 Rules. These limits are designed to provide reasonable protection against harmful interference in approved installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Modifications or changes to this equipment not expressly approved by ProComSol, Ltd may void the user’s authority to operate this equipment.

Contains Transmitter Module FCC ID: X3ZBTMOD1
